

Enterprise Search Data Sheet

SeeUnity Search Benefits

A range of customizable search tools provide a series of benefits:

- **Native Searching** – full native ECM searching through SharePoint.
- **Better Results** – Searches return metadata summaries with each result
- **Broader Searching** – Users submit queries against multiple sources, with a single result list.
- **Faster Searching** – Rapid indexed search means people spend less time searching.
- **Up-to-the-minute results** – Real-time searches ensure the most current results.
- **Canned Searches** – Make answers available to frequently asked questions with “smart list” pages.
- **Keep Sensitive Content Safe** – Preserve native security and permissions to ensure content remains safe.
- **Optimizing Licensing and UIs** – Allow licensed remote users full native search access from SharePoint.

Enterprise content integration is based in the ability to find, access, and manage content between 2 or more systems. A requirement for effective integration is enterprise search. SeeUnity offers several enterprise search solutions for SharePoint, each with unique benefits. SeeUnity enables customers to configure a search solution that will best meet their needs.

Building the best search solution

SeeUnity has developed multiple search options. When it comes to enterprise search, one size does not fit all. Organizations should review and prioritize their architectural and use-case priorities.

SeeUnity web parts

Web part native search tools connect directly to the root location of native ECM directory. Using the appropriate repository connector, the web part fully recreates a native search experience. This includes a rich search UI, with multiple form fields to target and narrow the search. SeeUnity's Core Integration Services can enable optional federated searching, so that a native UI can search multiple locations simultaneously. SeeUnity web parts are ideal for:

- A single external ECM platform with one or many libraries/directories
- The ability to leverage thorough, native search tools
- Comprehensive, ranked search results, including summary lists with field values
- Recreating a native-centric search experience in SharePoint

SeeUnity protocol handler

SeeUnity's protocol handler crawls external repositories, and builds a SharePoint search index. Once indexed, this provides a search interface that can provide rapid, federated results. Changes to content results are captured during a periodic re-indexing of updated content. SeeUnity's protocol handler is ideal for:

- Users who benefit from a ubiquitous search toolbar
- Faster search performance
- A SharePoint-centric approach to searching

SeeUnity Federated Search Connector

The Federated Search Connector provides an OpenSearch interface that submits real-time search requests against all integrated repositories. This option avoids the need to crawl repository indexes, and ensures that search queries return the most recent content. SeeUnity's Federated Search Connector is ideal for:

- Providing the most up-to-date results
- Thorough result information
- Reducing the footprint of the SharePoint search index
- Leveraging the OpenSearch standard

SeeUnity Enterprise Search Module for Fast

The Enterprise Search Module for FAST leverages the powerful, new Microsoft FAST technology. By using the FAST module, organizations can harness the speed and relevancy ranking system available through the FAST technology. The Enterprise Search Module for FAST is ideal for:

- Organizations that are considering FAST implementation as part of their Enterprise Search strategy
- Benefitting from indexed searching, without leveraging the SharePoint search index
- Implementing FAST's powerful relevancy ranking system
- Building a lightweight search interface that can operate independent of SharePoint

Take the Next Step

Powerful, flexible searching is a mission critical requirement for Enterprise Content Integration. SeeUnity offers multiple options for providing search tools that meet your organization's needs. SeeUnity search tools provide thorough cross-repository visibility, risk-mitigating security, and scalable performance.

SeeUnity is a leading developer of Enterprise Content Integration solutions that enable users to search, access, and manage all enterprise content from a common interface. Our products bridge content platforms, and remove the barriers between content silos. SeeUnity brings content together. For more information about how SeeUnity can solve your integration requirements, email us at sales@seeunity.com or call us directly at 970.744.5011.
